

Automatic Tire Cleaning Machine ATC - 753

Vacuum arm is lowered into tire casing. Water is sprayed at 1000 psi to clean tire while the vacuum removes dirt and water from tire casing.

Easy load ramp.

Tires are rotated at 6 rpm's.
Fits all tires mounted on
19.5, 22.5 & 24.5 rims.

FEATURES:

- Automatically cleans the inside of tire casings
- Removes dirt, leaves, water soluble tire sealants, balancing powders, etc.
- Removes standing water from tire casing
- Prepares casing for inspection

BENEFITS:

- Improve labor efficiency
- Improve visual inspection
- Protect against chamber fires

TOTAL RUN TIME	100 seconds
TOTAL Handling Time	20 seconds

The ATC-753 was designed and manufactured for use in retread production facilities and for large fleets using water soluble tire sealants or balancing powders. The Automatic Tire Cleaning Machine cleans tires in a fast, efficient manner to keep up with retread production.

The ATC-753 will fit *ALL* tires that can be mounted on 19.5", 22.5", 24.5" rims. Once the tire is positioned correctly on the machine the operator starts the cleaning cycle and the machine will do the rest. At the start of the cleaning cycle the tire begins to rotate and the vacuum pulls any loose debris from the tire. After approximately 30 seconds of vacuuming, high pressure water(1000 psi) sprays the inside of the tire to wash the remaining debris off the tire casing. The water shuts off and the vacuum continues to pull all remaining water / debris out of the tire. The operator can then remove the tire from the machine and take it to the visual inspection station. Waste material can be drained from the vacuum into a 55 gallon drum or into a the sewage system in accordance with local regulations.
